

Middle & High School Enrichment Course Descriptions 2025 - 2026

Art

Throughout the year, students will study the elements of art and apply them in a variety of forms to student generated works of art. Students will create a portfolio of work and the year will culminate with an art show where students display their best work.

PE

Students will learn health and wellness core concepts and develop motor skills, knowledge, and behaviors for physical fitness through participation in structured exercises, games, and team sports.

Science Lab

Students will learn about the scientific method and apply it to areas of scientific study such as biology, chemistry, and physics through hands-on laboratory lessons.

Life Skills

Students will be introduced to a variety of basic functional life skills to help prepare them for adulthood.

Psychology (1 semester)

Students will be introduced to the scientific study of behavior and mental processes specifically looking at the operations of the brain and its development through well-known case studies.

Economics (1 semester)

Students will study macroeconomic concepts such as supply and demand, as well as discuss personal finance and business entrepreneurship.
